introduction about searchlight

Established in 1945, Searchlight is one of the most successful lighting businesses in the UK and one of the largest lighting suppliers in Europe. A truly international operation, Searchlight employ over 200 people across its divisions.

Under the 'Searchlight' brand the business offers the most extensive selection of decorative lighting products in the UK, including traditional chandeliers and statement pendant lights, easy fit shades and a wide range of outdoor, wall, table and floor lamps.

Building on its enviable reputation within the lighting industry, Searchlight diversified its offering into the commercial lighting sector with the acquisition of the Illumina Lighting brand in 2006.

Serving the retail, commercial and leisure sectors, Illumina prides itself on its product innovation and design, providing a portfolio of award winning, contemporary quality lighting products that perform both technically and aesthetically.

Searchlight is known for:

- Sector leading customer service levels
- Rapid delivery and industry leading stock availability
- Industry competitive guarantees on all products
- Comprehensive after sales and marketing support

introduction about the project collection

Welcome to the first edition of the Project Collection catalogue. We have developed this catalogue with you the 'specifier' in mind. Its purpose is to provide a single catalogue solution that will enable you to effectively specify lighting for your project requirements.

Within each section of the catalogue we provide lifestyle photography to illustrate the lighting outcome that will be achieved with the product, along with clear photography and technical information that will allow you to effectively specify the product.

You will also find a number of useful and easy to follow advice guides to help you understand why, how and where to use the products to achieve the correct lighting outcome, along with installation instructions and diagrams to aid you in the installation of the products.

1. Who is this catalogue for?

The simple answer is anyone that is 'specifying' lighting on a project, this includes but is not limited to; Architects, Interior Designers, Lighting Designers, Electricians, Contractors, Self-Builders or clients.

2. What type of 'projects' do I specify this product on?

This catalogue and the range of products within it have been developed for 'residential' projects. This includes but not limited to; property development or refurbishment, hotels and guest houses, bars & restaurants, care homes and student accommodation.

3. Why the Project Collection is the right choice for your projects?

a. Product selected specifically for Projects

The Project Collection range of products have been selected specifically for residential projects.

b. Warranty & Quality Assurance

All products are manufactured and rigorously inspected in order to meet the exacting technical and quality standards demanded by the market. We back this up with standard 3 Year warranty across the Project Collection range.

c. Stock Availability & Deliveries

All items are held in our Manchester based warehouse, we offer unparalleled levels of stock availability and service with all project collection products available ex-stock for immediate delivery.

d. Support

Our sales support staff are available over the phone on **T +44 161 203 3300** or via email at **sales@searchlightelectric.com** Monday to Friday 8.30am to 5.00pm to handle any order or product queries.

Also, our website is available 24/7 with detailed product information, advice guides and fitting instruction information, as well as providing live stock availability for all products at **www.searchlightelectric.com**

collection

advice guides introduction

The Project Collection catalogue has been developed to provide the specifier with the required information to effectively specify the correct product for the task at hand.

We have created a collection of easy to follow advice guides to support and aid the specification of project lighting:

advice guide why 3000K

3000k is the ideal choice for artificial light in residential settings. It mimics the daylight that you would want at the times of day when there is no natural daylight.

did you know that a higher colour temperature, such as 4000K (Cool White) will appear to be brighter than 2700K (Extra Warm), but this does not necessarily mean greater detail is achieved as a result. This is because the human eye sees detail by warmer light sources, and you therefore need lower levels of light to see more detail.

To provide an example of this, consider street lighting. Where traditional sodium street lights gives a dim

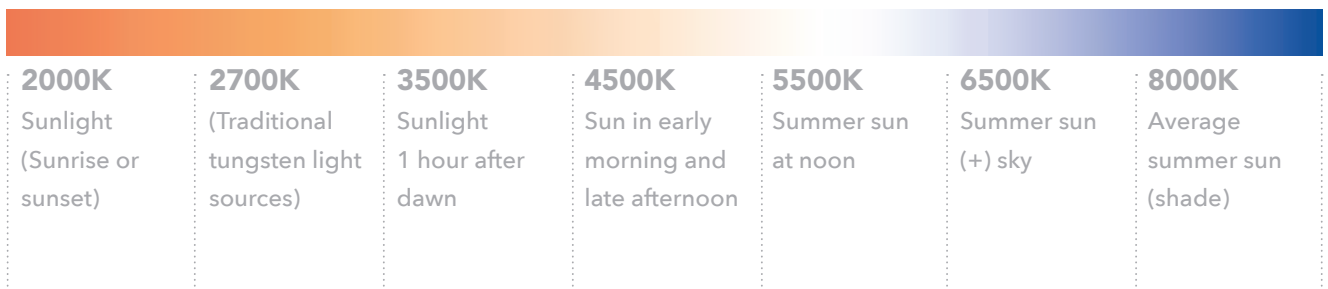

orange light, you can easily see the potholes and details in the road. In contrast some new LED 'daylight' street lighting at 6000K appears to be a bright light source, but in reality, we can see less detail by it.

With this in mind, when approaching your lighting project, you need a balance of brightness and warmth. 2700K gives quite an orange light, similar to the colour from a traditional tungsten lamp. Here you are sacrificing light output for

warmth. 4000K is too cool to be cosy. Whilst the light is brighter, colours in the home appear dull, and you lose the ability to easily see detail.

In a residential setting, artificial light has two purposes; firstly to aid with tasks and secondly to provide ambient light to create atmosphere. If we consider that daylight will be present at the times of day when you would want a higher colour temperature, then 3000K is the ideal choice for your lighting.

colour temperature °kelvin

advice guide

residential lighting design

Lighting is one of the most important elements of a project but often the least considered. Lighting impacts on the interior and functionality of a space more than any other element.

by creating flexible lighting schemes, you can transform a single interior space for multiple moods and functions. Whether you're working on a new project or overhauling an existing space, thinking about your lighting at the outset will make the most of the space.

Firstly, consider how you will use the space. There will be one main activity for each room, but also bear in mind the other activities which take place and can be catered for through the intelligent use of lighting.

For instance, a kitchen is a multi-functional space and lighting should be employed as a way to make your kitchen a more functional and enjoyable space. Ensure that it caters for practical tasks such as cooking and cleaning, yet also works to create an atmosphere perfect for social occasions.

Planning for these different lighting requirements before you start your lighting project will ensure maximum contrast and flexibility.

1. Decide on the main function for the room.

2. Identify the other activities that the lighting scheme must accommodate.
3. Highlight architectural features.
4. Decide which circuits need to dim.
5. If a space is to be truly multi-functional consider a local lighting control system. This usually allows you to pre-set 4-6 different scenes, and works particularly well for a kitchen/dining/living space.

When you use these principals of lighting design you will be able to blend together your different lighting elements and create a selection of functions and moods for your interior.

LED Strips

See pages 124-129

Ambient Lighting

This is your background lighting, onto which you layer other types of lighting. Use ceiling and wall lights with a wide spread of light to bathe a space in ambient light. Use powerful indirect luminaires to bounce light off walls and ceilings for a softer reflected background light. Look for fittings with a higher lumen output.

Suitable fittings include:

Wall:

Tube and Ovo (page 53)

Universal Shades in Coconut and Mushroom (pages 74-77)

Corona and Luna (pages 114-117)

Cambronne and Charonne plaster uplights (page 89)

Ceiling:

Oh Pendant & Oh Flush (page 41)

Blob flush & pendant ranges

(pages 42-45) / Corona & Luna

(pages 114-117) / 3lt Semi flush

and pendants for shades in Coconut

& Mushroom (pages 47-49)

Janus & Juno panel lights (page 37)

Recessed Ceiling:

Recessed Panel lights (pages 32-33)

Task Lighting

Functional lighting aids you with the tasks performed in that space. Kitchen work surfaces and desks need direct lighting. Use directional fittings with a focused beam of light to achieve this. Add localised light where you need it; inside cupboards, over worktops, alongside a mirror. A floor or table lamp next to your work space is preferable to achieving adequate light for that area from a central light source.

Suitable fittings include:

Recessed Ceiling:

All items (pages 16-29)

Wall lights with reading arm:

Victoria (pages 71 & 73)

Waterloo (page 67)

Pimlico (page 69)

Arc Floor Lamp (page 79)

Bathroom Wall Lights:

Lucina LED (page 141) / Cala

(page 141) / Taper (pages 144-145)

Can Can (pages 146-147)

Boules (pages 148-149)

Picture Lights:

Rondo & Cubo (pages 54-57)

Feature Lighting

Feature lighting can be considered in two ways. Firstly, you can light a specific feature in the room, such as an arched recess or fireplace detail. Alternatively, the light itself can be the feature. See our sister catalogue, the Searchlight Decorative Collection for over a thousand decorative fittings to choose from.

Suggested fittings include:

Recessed Wall Lights:

Simplon and Pyrenees ranges

(pages 60-63)

LED Strip

All items (pages 124-131)

Recessed Floor / Ceiling Lights:

Holborn & Hoxton (page 153)

Piccadilly (page 179)

Paddington (page 177)

Spotlight

Mini projector (page 59)

advice guide kitchen lighting

Lighting is an integral part of any kitchen design and should be a key consideration during the initial planning stages of your project.

Often referred to as the 'heart of the home' the kitchen is a multi-purpose space and therefore thought should be given to the different tasks and occasions of the space.

Lighting should be employed as a way to make your kitchen a more functional and enjoyable space. Ensure that it caters for practical tasks such as cooking and cleaning, yet also works to create an atmosphere perfect for social occasions. Whatever your requirements, the lighting scheme should enable and enhance these experiences. Follow these **three steps** to make your kitchen a functional and enjoyable space:

① consider task lighting

1. Position recessed ceiling downlights in line with the edge of your work surface. Spacing approximately every meter will give even coverage from a light source with a 38° beam angle. For very high ceilings fittings need to be closer together or in pairs to achieve a brightly lit work surface. For low ceilings choose a lamp with a wider beam angle.
2. Only use downlights where task lighting is required. Do not light walkways directly as this is wasted light. Downlights are also useful over doorways.
3. Add under cupboard lighting for additional light on work surfaces, or in areas where there is no flat ceiling above the task area. LED strip will provide a contemporary line of light, whilst the focused beams from spotlights add interest to otherwise plain walls.

Try to avoid making these mistakes:

- Grids of recessed spotlights - no-one lives life in grid formation, and using a grid will put light where you don't want it.
- Recessed spotlights located over cabinets will only light the top surface of the cabinet and not the room.
- Recessed spotlights over the walkways in a kitchen will create shadows when you're standing at a work surface. Unless you prepare your food on the floor this is wasted light. The walkways will be lit by light reflecting off your cabinets and walls.
- Avoid pointing fittings directly at seating positions. Sitting in the glare of a light is uncomfortable.

② consider ambient light

1. A row of pendants over a kitchen provides good ambient light in the centre of the room.
2. A single pendant gives a wash of light over a dining table.
3. Use wall lights to bathe the walls in light and create a sense of light without lighting the whole area.
4. Position lighting on top of cabinets to wash the ceiling with light and give the perception of taller ceilings.
5. Bathing walls in light will make a small kitchen feel bigger. If wall lights aren't an option then angle recessed ceiling fittings towards walls and cabinets. Recessed ceiling wall washers are particularly useful for this, and can light pictures or feature walls very effectively.

③ consider feature lighting

1. Pendants both break up the space and create cosy areas. Use these over tables and islands.
2. A single statement pendant will provide maximum impact and is easy to swap as your tastes change over time. The Searchlight Decorative Collection has hundreds of designs for all interior styles.
3. Conceal light sources on top of cabinets or under island units to create a floating effect. LED strip is particularly effective.

Layer your lighting and use multiple and dimming circuits where possible. This will enable you to have many different lighting states and help create the desired mood at different times of day.

Suitable fittings include:

Wall:

Tube and Ovo (pages 53) / Corona and Luna (pages 114-117) / Cambronne and Charonne plaster uplights (page 89)

Ceiling:

Oh Pendant & Oh Flush (pages 41)

Blob flush & pendant ranges (pages 42-45)

advice guide bedroom lighting

Bedrooms should be a haven of calm, and lighting is key to setting the scene. Give consideration to the lighting during the initial planning stages of your bedroom project.

by layering and blending Ambient, Task and Feature lighting you will create a peaceful setting with good lighting for reading, dressing and awakening.

Follow these **three steps** to make your bedroom a calming and functional space:

SH-SF3-CP & SH-P3-CP / AB / SN /

See pages 47 & 49

① consider ambient lighting

Locate these either side of the bed and near the door. Downlights are a popular choice but should be used sparingly in a bedroom. Position downlights in corners to make the bedroom feel bigger. Try lighting a single wall or run of wardrobe fronts as a softer light will be reflected into the space. Avoid using downlights directly over pillows as they can give an uncomfortable glare. A centrally positioned pendant or ceiling light will bathe the room in a soft light. Dressing and cleaning need a higher level of light, and these ambient fixtures are ideal for this. Try hanging a pendant over a bed; you can position this fitting lower for maximum visual impact. Wall lights are ideal for giving the softer ambient light needed on waking or going to bed.

SH-WBPIM-CP / AB / SN
SH-WBVIC-CP / AB / SN
SH-WBWAT-CP / AB / SN

See page 68
See page 70
See page 66

SH-VICLED-CP / AB / SN

See page 69

② consider task lighting

Specific lighting for reading and inside cupboards and wardrobes will give you light where you need it without disturbing the peace. Wall lights with an LED reading arm are the perfect task light to allow your partner uninterrupted sleep. LED strip and surface mounted cabinet lights work best for wardrobes.

SH-WBVICR-CP / AB / SN

See page 67

LST-PRO-R1

See page 128

③ consider feature lighting

Feature lighting can both provide interest and act as a night light. Try using LED Strip behind a headboard, or under the bed for a floating effect. Recessed wall lights will guide the way to the door and give you interesting light patterns on the floor. Try to combine at least two different light sources, so you can layer your light.

Using dimmers where possible will allow you to set the mood and change the scene.

Suitable fittings include:

Wall:

Tube and Ovo (pages 53)

Corona and Luna (pages 114-117)

Cambronne and Charonne plaster uplights (page 89)

Ceiling:

Oh Pendant & Oh Flush (pages 41)

Blob flush & pendant ranges (pages 42-45)

zeus features

Zeus dim-to-warm lighting modules are suitable for hospitality and residential environments such as hotels, restaurants, dining rooms and bathrooms, where there is a desire to mimic the behaviour of incandescent lamps or candlelight.

When delivering maximum light output, the colour is white, but when lighting is dimmed, the CCT drops to simulate dimmed incandescent or candlelight.

Benefits and features of the 'Zeus' All-in-One Universal Downlight:

- **Fire Rated** - Tested in 30, 60 and 90-minute fire-rated ceilings and can be directly covered with insulation.
- **IP65** - Can be specified in bathrooms over shower / bath.
- **20° Tilt** - Can be used in a fixed or tilted orientation.
- **Anti-Glare** - Light source is set back from the face of the fitting.
- **Integrated Design** - Enables effective heat dissipation.
- **3000K Mains Dimmable** - Smooth and linear dimming.
- **Dim to Warm** - CREE COB provides Dim to Warm Option (2000K to 2800K) with great color quality and warm CCTs at High CRI levels (CRI 82).
- **Cameta™ Lens** - Provides high transparency and evenlight output.
- **Part L Compliant** - Adheres to the energy efficiency requirements of Part L of the Buildings Regulations.

shades

Key

- C - Coconut
- M - Mushroom
- G - Grey seal

All the shades in this collection are:

- Cotton on White PVC lining
- To suit E27/E14/B22 shade ring
- For use with LED lamps only -
The frosted LED filament lamps on page 182 have been specially developed to eliminate shadowing on the shades from the LED filaments
- Available from stock in the UK
- Flame retardant

Select your shade fittings here:

- Wall lights - Pages 66-73
- Pendants & ceiling - Pages 46-49
- Floor lamps - Pages 78-79

Special colours available.

Minimum order quantities will apply. Allow 4 weeks for a sample and 12 weeks order lead time.

guide to using LED strip

① choose your strip and connectors

- 4.8W/m - feature glow of light
- 9.6W/m - brighter feature light
- 14.4W/m - ambient light
- 20W/m - primary light source

② choose your profile

- Recessed profiles conceal lines of light
- Surface mounted profiles are easy to fit
- Use corner profile for angling the strip at 45° to a surface, particularly useful for lighting shelves, inside wardrobes and over kitchen worktops
- A profile must be used with 14.4W/m and 20W/m strips

③ select your driver

- Multiply the total number of metres of strip to be run from a single driver by the wattage of the strip e.g. 6m of 9.6W/m strip = 57.6W
- Decide if your circuit needs to be dimmable
- Select the driver e.g. dimmable LST-DRD80, non-dimmable LST-DR75

advice guide bathroom lighting

Your bathroom lighting should be functional and relaxing, ensuring that it caters to both the practical tasks such as brushing and shaving, while also creating an atmosphere perfect for the relaxing bath.

bear in mind, a bathroom is often a space where artificial lighting is required during daylight hours and this should be considered during the initial planning stages of your project.

Follow these **five steps** to make your bathroom a functional and relaxing space:

1. Think about the scenes;
- What different tasks will you perform in your bathroom and where?
- What different lighting states would you like to achieve?

2. Blend Task, Ambient and Feature lighting to create a lighting scheme that's both effective and flexible.
3. What areas do you need to light?
 - Mirrors, sinks, showers and baths need to be well lit. Locating an ambient wall light next to a mirror will turn it into a task light.
 - Toilets and floor space do not need to be lit directly.
4. Work within the regulations; (Refer to diagram and explanation on page opposite)
5. Consider the number of circuits;
 - Lighting can only create scenes by switching different light sources separately
 - Keep your primary task lighting on one circuit
 - Use a minimum of two circuits to give you the option of an ambient light setting
 - Lit mirrors with a built in switch will give you an added lighting state without an extra switch on the wall.

ambient lighting

BA-BOU3R

See page 149

Suitable fittings include:

- 3W Recessed LED IP67 (page 152)
- Holborn & Hoxton (page 153)

feature lighting

BA-CALA3W / BA-STRA3W See page 142

Suitable fittings include:

- Cala & Stratum (page 142)
- Ball & Ovo (page 143)

All bathroom lighting installations must comply to the guidelines set out in Amendment 1 of the 17th edition of the IEE Wiring Regulations (BS7671). The bathroom is divided into zones, with prescribed minimum IP ratings for the light fittings in each zone.

IP rating = Ingress Protection rating.

zone 0

The area inside the bath or shower tray. Fittings must be rated at IPX7 or higher (protected against immersion in water).

zone 1

The area above the bath or shower up to a height of 2.25 metres. Fittings must be rated at IPX5 or higher (protected from jets of water).

zone 2

Covers an area 0.6 metres wide immediately next to, and all around Zone 1. The 60cm area around washbasins should also be treated as zone 2. The minimum rating is IPX4. If there is a likelihood of water jets being used for cleaning purposes in Zone 2, a minimum of IPX5 is required.

outside zone

Covers any area outside Zones 0, 1 and 2. There is no IP requirement in this zone. Bathrooms are allowed to contain a socket outlet, this must be located 3 metres outside Zone 1. Lighting circuits and any socket-outlet circuit in a room containing a bath and/or shower must be provided with 30mA RCD protection.

outdoor

advice guide outdoor lighting

When considering outdoor spaces, think about when it will be used most and design your lighting scheme around this. By understanding how the natural light affects it you can maximise its effects for the ultimate external space.

remember, your outdoor space is an extension of your home. Layer the three types of lighting; Ambient, Task and Feature in the same way as for your internal space.

Follow these **three steps** to make your garden a calming and beautiful space:

IPR-EUSSS / PNP-CON5

See pages 168 & 181

① consider ambient lighting

Using multiple low output lights to highlight specific areas will be visually interesting and define the shape of your garden. Place wall lights at entry points for added safety and security. Try to avoid flood lighting your exterior and overwhelming the space with light.

IPR-EUSSS / PNP-CON5

See pages 168 & 181

OD-SAPR / OD-SAPS

See page 159

② consider task lighting

Illuminate the spaces in which you spend most time, such as your decking or seating area. Consider;

- Lighting pathways is essential.
- Lighting other areas that you will spend time in such as a BBQ area where you need a practical lighting solution.

③ consider feature lighting

Provide a theatrical aesthetic with your outdoor feature lighting. Don't be afraid of the dark - highlights and shadows will add drama to your space and pick out your architectural and landscaped features if carefully considered.

NOTE: For complete control, use a mixture of dimming circuits, dusk sensors, timers and PIRs with all your different lighting styles.

Suitable fittings include:

Coastal:

Sapporo range (page 159) / Yokohama (page 161)
Tokyo (page 163) / Kobe range (pages 164-165)
Kyoto range (pages 166-167)

Plug & play:

Ground light (page 168) / Spike spot with extension poles (page 169) / Deck light (page 123)
Square & round deck light and Ankle light (page 171)

Recessed LED:

Plot light (page 175) / Paddington range (page 177)
Piccadilly range (page 179) / Euston ground light (page 181)

advice guide plug & play

Plug & Play offers a complete range of 12V LED garden lights and accessories, with fittings designed to light all parts of your landscape.

Combine a large number of different fittings to light large areas by a variety of lighting techniques and all from a single mains power supply. The Plug & Play cable system enables you to easily connect fittings where you need them, and offers the opportunity to update your lighting scheme as your garden changes through the seasons. Using the screw on connectors you can do this without the need for an electrician.

Follow these simple steps:

1. Sketch the area with dimensions and choose which parts you want to light.
2. Select the most appropriate fittings for each lighting requirement.
3. List the fittings with quantities and wattages, e.g.
 $3 \times \text{PNP-POLE5 } 5\text{W} = 15\text{W}$
 $5 \times \text{PNP-RSS1.5 } 1.5\text{W} = 7.5\text{W}$
 TOTAL = 22.5W
4. Select your driver based on the total wattage of the fittings, being careful not to exceed the minimum or maximum load of the driver.
5. Position your driver. The driver comes with a 13A plug. If this is not in the house then you will need to locate the connection in an IP rated box. Note that you may need more than one mains feed and/or driver for covering a larger area. Always consult a qualified electrician if changes to your mains cabling are required.
6. Measure the distances from the driver to the fittings and choose which cables and connectors will be needed. We recommend a maximum total cable run of 60 metres off a single driver.

Visit our website to view a full installation guide at www.searchlightelectric.com

Important Notes:

- The Plug & Play range is not dimmable
- Switch off power and allow 10 minutes for residual current on the circuit to dissipate before you connect or disconnect any fittings
- The three year warranty is only valid when using Plug & Play fittings, cables and drivers.

guide to symbols

CLASS 1

Class I fittings must have their chassis connected to an electrical earth (ground).

CLASS 2

Class II or double insulated electrical fittings does not require a safety connection to electrical earth (ground).

CLASS 3

Class III fittings are designed to be supplied from a separated / safety extra-low voltage (SELV) power source.

IP 44

(4) Objects greater than 1 mm, e.g. tools, wires / small wires
(4) Protected against water sprayed from all directions - limited ingress permitted.

IP 54

(5) Protected against dust - limited ingress (no harmful deposits)
(4) Protected against water sprayed from all directions - limited ingress permitted.

IP 65

(6) Totally protected against dust (Dust-tight)
(5) Protected against low pressure jets of water from all directions - limited ingress permitted.

IP 67

(6) Totally protected against dust (Dust-tight)
(7) Protection against the effects of immersion between 15cm - 1 metre

SWITCH

The product has an electrical ON/OFF switch incorporating a spring-loaded rocker.

DIMMABLE

The fitting can be used with a compatible dimming light switch.

GLASS

The fitting contains fragile glass parts.

CUT OUT 75mm

The electrical parts of the fitting require a ceiling cut out.

DRIVE OVER

The outdoor, inset floor mounted fitting can be driven over by a vehicle, up to 2000kg weight limit.

FIRE RATED

Fire rated downlights restore the fire integrity of a ceiling with recessed ceiling lights installed.

320kg WALKOVER

The outdoor, inset floor mounted fitting can be walked over by a flat foot, up to 320kg weight limit.

350mA

A unit of electric current (mA) equal to one thousandth of an Amp.

24 VOLTS

The SI unit of electromotive force, the Volt (V) is a standard for extra low voltage power systems.

finish

CP

Polished chrome finish fixtures & lighting fittings.

AB

Antique brass finish fixtures & lighting fittings.

SN

Satin nickel finish fixtures & lighting fittings.

C

Coconut colour cotton material lamp shade.

M

Mushroom colour cotton material lamp shade.

G

Grey seal colour cotton material lamp shade.

Polished chrome

Antique brass

Satin nickel

Coconut OFF

Coconut ON

Mushroom OFF

Mushroom ON

Grey seal OFF

Grey seal ON

colour

glossary

Beam Angle / Spread

This is the angle between the two directions opposed to each other over the beam axis for which the luminous intensity is half that of the maximum luminous intensity.

COB LED

Chips on Board is a new technology of LED packaging. Multiple small LED chips are packaged together as one lighting module.

Colour rendering

The ability of a given light source to render colours naturally, to reveal the colours of various objects faithfully in comparison with an ideal or natural light source.

The colour rendering index (CRI) ranges from 0 to 100, and is also sometimes shown as Ra.

Colour temperature CCT

The temperature at which a black body would emit radiation of the same colour as a given object. This is measured in degrees Kelvin. The lower the Kelvin number the warmer the light source. See the visual guide on page 7.

Die-cast

A casting process which produces metal components with excellent dimensional accuracy and smooth cast surfaces.

Diffuser

Optical cover used to mix light rays to reduce glare or improve uniformity. An opal cover is an example of a diffuser.

Glare

Glare is the difficulty in seeing when a light source is directly visible to the eye. Some fittings incorporate a baffle (where the light source is set back from the front plane of the fitting) or diffuser to shield the eye from seeing the light source directly.

IP Rating

IP Ratings (also referred to as ingress protection) are defined in international standard EN 60529. They are used to describe levels of sealing effectiveness of electrical enclosures against intrusion from foreign bodies (tools, dirt, etc.) and moisture. It is published by the International Electrotechnical Commission (IEC).

Kelvin

A measurement of temperature. $0^{\circ}\text{C} = 273^{\circ}\text{Kelvin}$. It is the SI unit used to express colour temperature.

LED

Light Emitting Diode used as a light source. An electronic semiconductor device that emits light when an electric current passes through it converting electrical energy directly into light.

Lumen

The standard unit of luminous flux, it describes the quantity of light emitted by a light source.

mA Milliamps

A milliamp is a unit used to measure electrical current and is equal to one-thousandth of an ampere (A).

Polycarbonate (PC)

Polycarbonates are a group of thermoplastic polymers containing carbonate groups in their chemical structures. Polycarbonates used in lighting are strong, tough materials, and some grades are optically transparent.

PC ABS

A mix of PC and ABS thermoplastic. This material offers the best features of two great thermoplastics: the strength and heat resistance of PC and the flexibility of ABS. PC-ABS also exhibits excellent feature definition and surface finish.

PMMA

Polymethyl methacrylate, also known as acrylic, is a transparent thermoplastic, often used in sheet form, as a lightweight or shatter-resistant alternative to glass. It can also be used as a casting resin.

Power factor

The ratio of the actual electrical power dissipated by an AC circuit to the product of the r.m.s. (root mean square) values of current and voltage. The difference between the two is caused by reactance in the circuit and represents power that does no useful work. The higher the power factor the more efficient the driver is.

Part Codes Explained

Each product incorporates a specific code related to the item classification, e.g. DL-ZEUS3K.

Ra

See Colour Rendering.

SMD LED

A type of LED module that uses surface-mount technology to mount LED chips on printed circuit boards (PCB).
